Dr. András Micsik is a member of the Department of Distributed Systems at MTA SZTAKI in Budapest, Hungary. He was active in the digital libraries field in all DELOS projects starting from 1995, where he was involved in distributed digital library architectures, semantic interoperability, digital library testing and evaluation. His main interests are interoperability and collaboration in digital libraries. He contributed to several international research projects in the topics of sharing metadata vocabularies, collaborative rating and filtering, peer-to-peer repository networks, etc. Recently, he works on the application of Semantic Web technologies in digital libraries. He is regular member of the program committee of the ECDL and ICADL conference series.
