**Germany**

Ms Katarzyna Biernacka is a researcher and PhD student in Computer Science Education at the Department of Computer Science at the Humboldt-Universität zu Berlin (HU) in Germany.

After she received her diploma in Computer Science at the HU, she started working as a project assistant and media designer in various projects funded by the Federal Ministry of Education and Research (BMBF) in Germany.

Until February 2019 she worked at the Computer and Media Service of the HU. She was initially responsible for the digital asset management system of the university but since July 2017 she was the project coordinator in the BMBF funded project "FDMentor" for which five universities were working together to create strategies, roadmaps, guidelines and open access material to create an exceptional research data management infrastructure. Together with her colleagues, Katarzyna was in charge of developing the Train-the-Trainer programme for Research Data Management.

Her strong interest in digital tools and the new forms of learning also shape her research interests. Since June 2016 Katarzyna have been doing research in the field of mobile information and communication technologies for education in Latin America and since February 2019 she's been working at the Department of Computer Science of the HU where she has focused her research on examining the challenges of publishing research data in relation to research integrity and data protection.
