

Priti Mahesh is an environmentalist and has been involved in various environment issues for more than a decade. She is currently working as a Chief Program Coordinator at Toxics Link, a not-for-profit environmental organization based in India and has been responsible for conceptualizing and putting into action many environmental initiatives and campaigns, especially on waste and chemical issues.

Priti has been engaged in various researches on quantification, hazards, practices related to E-waste and Plastic waste and has great understanding of international best practices on these issues. She has spearheaded several projects related to plastic recycling in India, especially looking at cross contamination and improper recycling of plastic. She has in- depth knowledge on the informal recycling sector in the country. She has also been also involved in training regulatory agencies, civil society organizations and industry on some of waste issues. She has been also associated with the issues of Bio-Medical waste management and Mercury and has extensively worked on occupational safety issues in health care, mercury management in healthcare institutions and bio-medical waste minimization.
