

TERI launches book on “DSM Action Plan of Tamil Nadu”

New Delhi: 30th July 2012

Energy Efficiency is seen as an important instrument in meeting growing challenges of the energy scenario of India and the world. In this context The Energy and Resource Institute brought out this book on DSM Action Plan for Tamil Nadu based on a study carried out with financial support from Shakti Foundation.

The book was launched by Dr Ajay Mathur, Director General, Bureau of Energy Efficiency in the ‘National summit on Energy Efficiency in MSMEs’. The book is based on extensive load research carried out in Tamil Nadu, to understand the load behavior of different consumer categories and factors affecting their electricity consumption patterns.

Through this book TERI has come out with a set of action points for implementation of Demand Side Management measures in the state. This book highlights that an active involvement of the state utility, government, regulator, manufacturers, state designated agency and financial institutions is necessary for successful implementation of Energy Efficiency measures.

It is expected that the recommendations of this study will get translated into action and the book will interest and guide policy makers, regulators, utility managers as well as different consumer groups in the state of Tamil Nadu as well as other states of the Indian Union.
